Trade Lab

TREND LINE **MASTERCLASS**

Understand Market Direction Like a **Pro**

For educational purposes only.
Not financial advice. Trade at your own **risk**.

Trade Lab

Trend Line

- A line that connects multiple price touches (wicks or candle bodies) to show market direction

For educational purposes only.
Not financial advice. Trade at your own risk.

Trade Lab

Uptrend Line

- Connects higher lows and acts as dynamic support

Downtrend Line

- Connects lower highs and acts as dynamic resistance

For educational purposes only.
Not financial advice. Trade at your own risk.

Trade Lab

valid trend line

- A valid trend line needs at least 2 touch points (3 touches = stronger confirmation)

For educational purposes only.
Not financial advice. Trade at your own risk.

Trade Lab

COMMON MISTAKE

- Do NOT force trend lines They should fit naturally with price action

For educational purposes only.
Not financial advice. Trade at your own risk.

Trade Lab

WICK vs BODY

- Trend lines can be drawn using wicks or bodies but always stay consistent

For educational purposes only.
Not financial advice. Trade at your own risk.

Trade Lab

ANGLE CONCEPT

- A healthy trend line has a moderate angle
- Too steep = likely to break

For educational purposes only.
Not financial advice. Trade at your own risk.

Trade Lab

BREAKOUT

➤ Breakout = Price closes beyond the trend line with strong momentum

For educational purposes only.
Not financial advice. Trade at your own risk.

Trade Lab

RETEST

➤ Retest = Price returns to the trend line after breakout to confirm support/resistance

For educational purposes only.
Not financial advice. Trade at your own risk.

Best Fit vs Perfect Fit Trendline

- Perfect Fit = A trendline that touches all points exactly but ignores overall market structure
- Best Fit = A trendline that follows the overall direction and ignores minor noise
- Markets are not perfect, so your trendline shouldn't be either

- ❖ Perfect Fit = Visual accuracy
- ❖ Best Fit = Market accuracy

□ Always prefer best fit over perfect fit

Touch Quality > Touch Quantity

➤ A few strong, clean touches are more reliable than many weak or inconsistent touches

➤ High-quality touches:

- 1) Clear rejection from the trend line
- 2) Strong reaction (bounce)
- 3) Clean structure alignment

☐ Prioritize clean reactions over the number of touches

- ❖ Quality = Strength
- ❖ Quantity = Confirmation (only if quality is good)

▪ More touches do NOT always mean a stronger trend line if those touches are weak or messy

Trendline Failure = Opportunity

- When a trendline breaks, it often creates a new trading opportunity
- Trendline Failure = Price breaks the trendline with strong close and momentum
- A trendline break signals a possible shift in market direction

MARKET SHIFT :-

- ☐ A trendline break signals a possible shift in market direction

PRO RULE :-

Don't fear trendline breaks
Learn to trade them

OPPORTUNITY TYPES :-

- ❖ Breakout trade
- ❖ Retest entry
- ❖ Trend reversal setup

AVOID MISTAKE :-

- Not every break is valid
- Watch for fake breakouts

CONFIRMATION :-

- Strong candle close
- Volume / momentum
- Retest reaction
